DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a matching network, classified in class 315, subclass 111.21.
- II. Claims 12-20, drawn to a plasma ion source, classified in class 315, subclass 111.81.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed. For instance, the combination (Group II) does not require a transformer comprising a core being made of 12 ferrite cores with 1.25 inch OD and 0.75 inch ID, being made of M-type ferrite as specified in Group I. The subcombination (Group I) has separate utility such as a plasma-generator chamber using treatment gas, nitrogen radicals or heat etc. that does not render any ion or electron as specified in Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2821

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
